Shared Readiness Gaps

Startup vs. Blitz-Scale Focus

As a **3-person founding team**, we must transition from doing the manual labor to managing the AI more productively. As we prepare to **blitz-scale**, we face three critical enterprise-wide gaps:

Productivity Gap (Founder Bottleneck):

As Laszlo and our Agentic AI scale, we cannot manually mediate every vendor dispute. We lack a scalable "Human-in-the-Loop" (HITL) infrastructure to efficiently triage edge cases. This bottleneck extends to the work necessary to grow **ready**. internally as well.

Cognition Gap (Cognitive Offloading):

When rapidly hiring skilled workers that may over-rely on AI, their performance can drop by ~20% because they "switch off their brains." In the context of our startup blitz-scaling (moving fast!), we risk missing algorithmic biases if our team blindly trusts the Quote Analysis Agent or the **mindful** AI without applying human critical thinking.

Learning Gap (*Tribal* Knowledge):

Our company knowledge is entirely "tribal" among the three founders. We lack the learning tools needed to rapidly upskill our first wave of new hires without relying on slow, traditional instructional design or an HR department to help with onboarding and knowledge transfer..

As a 3-person startup, **our readiness strategy isn't about breaking down legacy corporate silos**; it's about figuring out **how three people can operate with the output of fifty**. Our biggest risk is cognitive offloading. Research shows that if we blitz-scale without a culture of accountability, our new hires will blindly trust our AI, leading to critical errors in vendor bookings and missed algorithmic biases in features like **mindful**. Furthermore, all our operational knowledge is locked in the founders' heads. We must fix our learning gap before we hire our next wave of employees."

Capability Clusters & Quick Wins: *laszlo labs*

To bridge our readiness gaps before blitz-scaling, we are launching *laszlo labs*: our internal "company culture brain." We will establish three core capability blocks, using *laszlo labs* as the central infrastructure for our immediate Quick Wins:

1

Cluster 1: "Double Literacy" & Ethical Governance

Training our team in "Hybrid Intelligence" to understand both human empathy and algorithmic mechanics.

2

Cluster 2: Scalable HITL Infrastructure

Transforming manual oversight into automated escalations.

3

Cluster 3: AI-Driven "Startup-to-Scale" Knowledge Base

Moving away from rigid training to AI-generated, on-demand learning.

Quick Win 1

Training our team in "Hybrid Intelligence" to understand both human empathy and algorithmic mechanics.

Quick Win 2

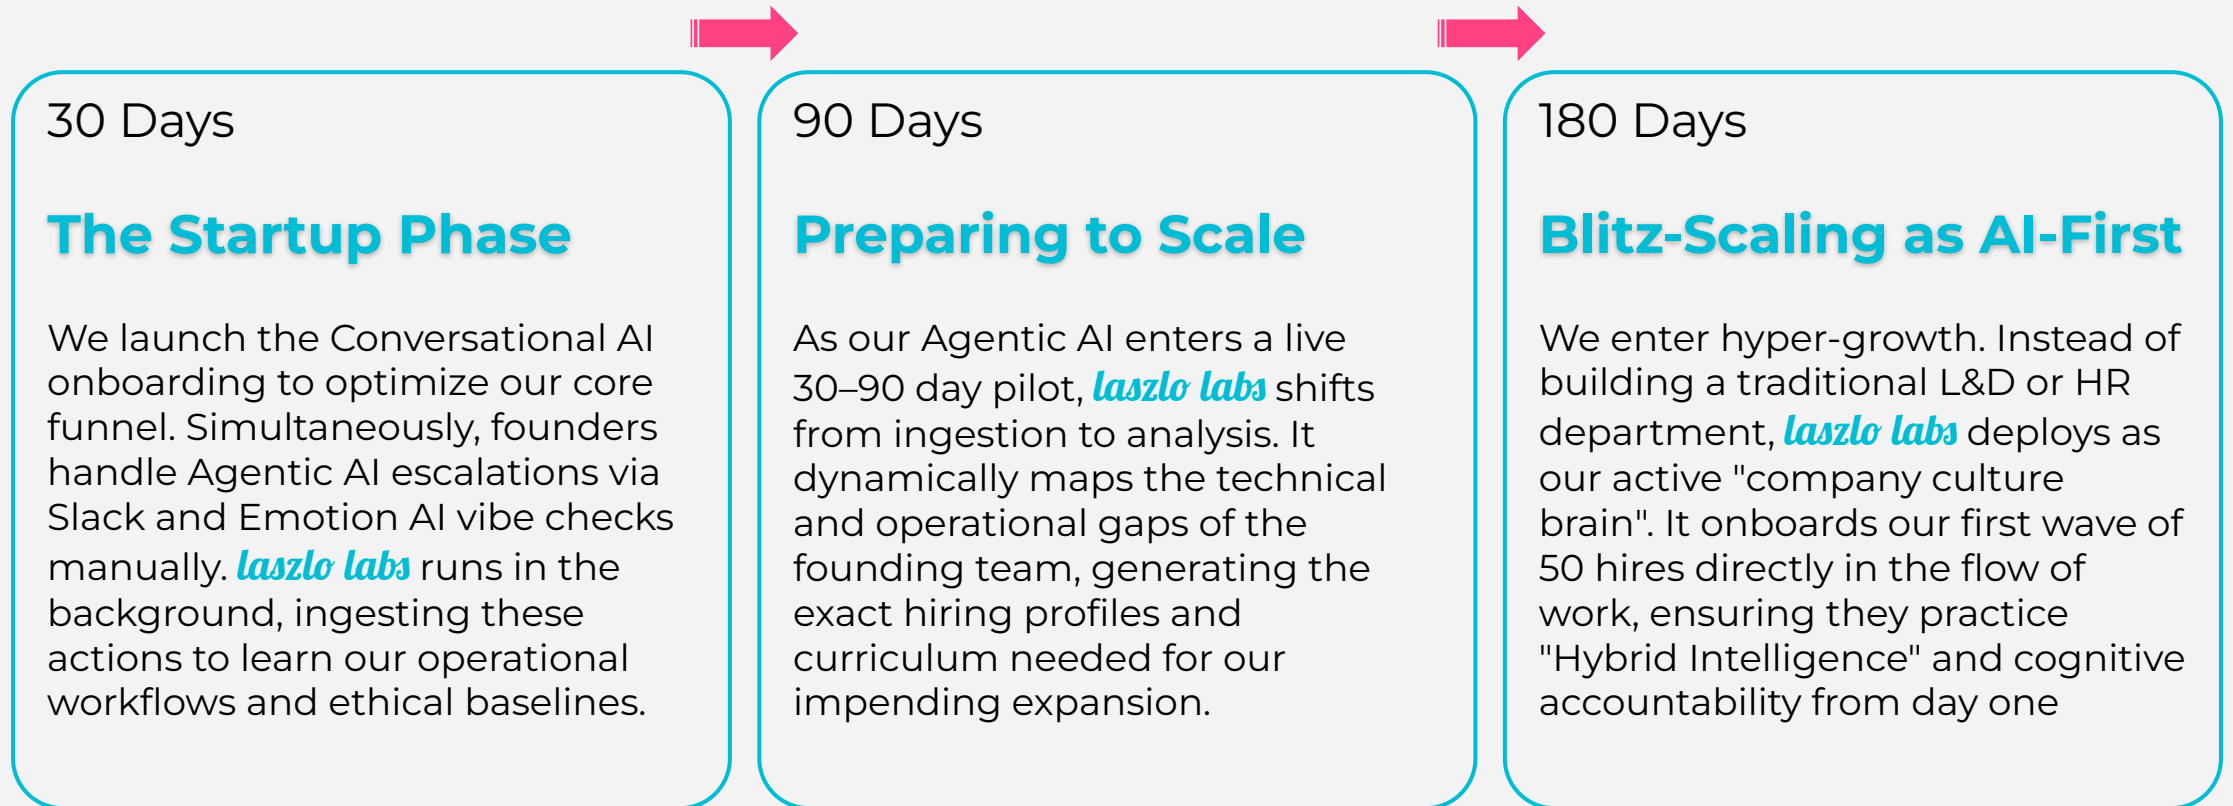

Training our team in "Hybrid Intelligence" to understand both human empathy and algorithmic mechanics.

Quick Win 3

Training our team in "Hybrid Intelligence" to understand both human empathy and algorithmic mechanics.

Phased Action Plan

Over a 180-day timeline, *ready.* will progress from establishing baseline conversational operations and triage alerts to piloting our Agentic AI, ultimately culminating in a blitz-scaling phase powered by AI-driven skills mapping and *in-the-flow* learning (*laszlo labs*) instead of a traditional HR department.

Strategic Insight (Executive Takeaway)

Core Executive Takeaway

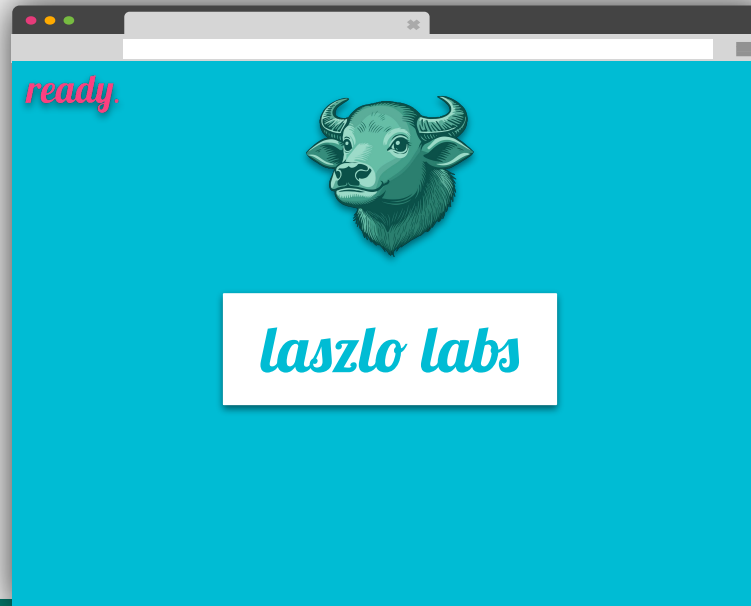

We are disrupting the traditional corporate growth model by bypassing the need for legacy departments (e.g., HR) through *laszlo labs*, our internal "company culture brain."

Hybrid Intelligence Command Center

Monitors the balance between human empathy and algorithmic mechanics to prevent cognitive offloading.

Scalable HITL Triage Engine

Automates the escalation of vendor disputes to remove founder bottlenecks.

AI-Driven Talent Architect

Maps technical gaps and generates precise hiring profiles for the blitz-scaling phase

In-the-Flow Knowledge Hub

Digitizes tribal knowledge into on-demand, AI-generated learning for immediate onboarding.

ready. is ready to scale because we have solved for our "Capability Gaps" before the first hire is even made.
